than any we have ever had anywhere.

nese People's Army, can't move an artillery piece without it being seen and reported by our high flying reconnaissance planes,

The U-2 at Hickam is one about this strange, black, A pilot on Formosa told of a kind that has been fly It is a strange sight to see single-seater, single-engine me last spring that our intelling since 1956. The Air Force an airman riding each wing plane without markings and ligence on China is better has more than 25 of them. Turn to Page 1-A, Column 4

It has a Pratt and Whitney J-37 jet engine and a win; According to him, the Chi-, so long and flexible that outrigger wheels must support it on the ground.

These wheels are really dollies which drop off by themselves as soon as the

## Secret Plane

Continued from Page 1
tip as the U-2 begins its take off run and jumping off just in time.

They do this to keep the dollles in place until the wings have enough lift to keep from scraping the run-

The wing spread gives the mystery plane an ungainly look but great lift and high sperformance above 70,000 feet in rarified atmosphere at the fringer of space.

It can cruise for hours beyond the reach of any known aircraft; and perhaps has "anti-radar" to ward off detection by unfriendly radar.

While cruising at these high altitudes, the U-2 can probe any terrain through its cloud-piercing radar eye.

It is so at home in thin atmosphere that one pilot jokingly said it can fly without burning fuel but on the fumes.

It has taken overhead photographs of hurricanes while flying more than 15 miles high.

It has been rumored as a "nuclear sample" catcher over Siberia.

Its services, or what it to does, are utilized by all the U.S. Armed Forces.

It is said to be involved with the Pacific missile grange.

## CLOSELY GUARDED

But the Air Force keeps it under wraps in a closed and guarded hangar at Hickam except when it is taken out for flight, and then spectators are kept at a great distance.

It is so highly guarded that two full colonels from the high-and-mighty Pacific Air Forces headquarters staff were told gruffly to "shove off" when they asked to get near the black enigma.

A local television cameraman had his film confiscated when he photographed the plane from a respectable distance.

The true mission of the mystery plane, now highly classified, may be more fantastic than the wildest suppositions.
